This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed & by International Genological Institute (GI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CDD (chemical woor deposition) or by HPHT (fingh pressure high temperature) growth processes and may include post growth modifications to change the color. Icil utilizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FTIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced sectors parts, replace the article guarantee, valuation nor appraisal and by making the report IGI does not agree to purchase or replace the article **INTERPARTONAL GENOCIOCIAL INTERPARTINE.** INC
